

Update Instructions

ATMS CORE Standalone Systems

- Copy the Update File:
 - Copy the update file to the default folder: C:\ATMS.CORE Installationssoftware\ATMS.CORE.Update.
- Run the Update:
 - Navigate to the default installation folder.
 - Double-click on the ATMSCORE-Update-Versionnumber.exe file to initiate the update.
 - Follow the on-screen instructions to complete the update process.

Note: Local administrator rights are required to run the update. Please ensure you have these rights before starting the update, or contact your IT administrator for assistance.

ATMS CORE SERVER Systems & Clients

Note: Customers are not permitted to update ATMS CORE SERVER Systems & Clients independently.

These updates must be performed by the Achterberg Support team to ensure proper configuration and system integrity.

- Contact Support:
 - To schedule an update for your ATMS CORE SERVER and its associated clients, please contact TCM Support via email at Service@Achterberg-GmbH.de.
- Assistance and Scheduling:
 - Our support team will coordinate with you to plan and execute the update, ensuring minimal disruption to your operations.

System Requirements

Supported Operating Systems:

- Windows 10: Minimum 8 GB RAM
- Windows 11: Minimum 16 GB RAM

Supported MS SQL Server Versions:

- For ATMS CORE Standalone Systems:
 - SQL Server / SQL Server Express 2017 – 2022
- For ATMS CORE SERVER Systems:
 - SQL Server 2017 – 2022

Required Software:

- Microsoft .NET Framework: Version 7 or higher

Hardware Requirements:

- Refer to the PC requirements documentation for ATMS CORE and ATMS CORE SERVER or contact TCM Support for detailed hardware specifications.

Bug Fixes

- Reliable E-Mail Test Function for Basic SMTP and OAuth

The e-mail test function in ATMS CORE has been improved to work reliably for both Basic SMTP and OAuth authentication methods. Administrators can now verify their e-mail configuration directly within the application, ensuring that the sending service behaves consistently whether testing or sending live messages. This improvement reduces configuration uncertainty and helps teams confirm correct e-mail setups faster and with greater confidence.

- Improved Supplier and Item Copy Function in Order Management

Copying a supplier or item in ATMS CORE now produces correct and fully configurable records. Previously, copied suppliers could become greyed out in the Configure Order File area because the sending service automatically assigned the original order template to the copy. This has been resolved by assigning copied suppliers to the standard template instead. In addition, copying an item no longer carries over the existing order quantity — the order stock is now reset to zero, preventing unintended duplicate orders in the background order process.
