

Software modul ATMS CORE “Interfaces”

ATMS CORE Module "Interfaces

Extension to ATMS CORE "Base" Module

Basic requirement is the software module ATMS CORE "Full

- Wintool interface, pre-installed standard interfaces for a Wintool connection (exchange of articles and booking data), adaptations deviating from the standard are possible against commissioning of the effort.
- Interface configurator full version (SSK3), user defined data import/export of format: TXT, CSV, XLS, XLSX, XML, SQL, REST service, SAP.Net, exchange via network path, e-mail, FTP, FTPS, MS-SQL, ORACLE (article master, commodity groups, suppliers, user group (name only), taker, cost center I, bills of materials, purchase orders), additionally export of fan configuration and booking data is possible.
- Interface Configurator Master Data Synchronization (SSK2) , Master data synchronization (article master, material groups, suppliers, user groups (name only), taker, cost center I, parts lists) between several controllers via CSV file exchange, where one controller is defined as leading.
- Catalog management (SSK1), time-controlled adjustment of article prices when changing catalogs via a defined file in CSV format.
- FTP administration incl. FTP for interface configurator, offers the possibility to transfer supplier or booking files alternatively on a FTP server or to fetch master data from there for an import. Supported protocols are FTP and FTPS.
- Matrix management, output of regrinding tools according to regrinding degree and number of spindles of the machines.
- IM3 interface via standard file exchange of article data, stocks, transport orders and bookings.
- COSCOM interface, matching of article master data and bookings via database tables.
- EXAPT interface, matching of article master data and bookings.
- FASYS interface, matching of article master data and bookings via database tables.
- SAP.Net Connector extension for interface configurator for export of booking data to SAP.
- TRENDIC interface, comparison of calibration data with a standard list.
- BALLUFF reader management, search for parts lists using BALLUFF chip data (a special chip reader from BALLUFF is also required).
- Machine tool information import, offers the possibility to automatically provide tools in suitable numbers based on supplied machine data. Special data in a defined structure and format are required from the machine. All items in the system must have different dimensions.

Additional hardware or software products may be required for the different interface types. These are not included in the software module and must be requested separately from the manufacturer or from Achterberg. Additional technician hours may be required for setting up the interfaces. These are not included in the software module and must be ordered separately. The effort can be requested from Achterberg.
